

Ion Moraru – Colloquium 10/17/2019

Title:

Intellectual Property (IP) Careers in Academia and Industry

Abstract:

Understanding the world of patents is essential for all PhD scientists in 2019. This is because scientists in academia and industry often interact with their technology transfer offices or IP legal departments regarding inventions developed during their research. In addition, it may open up interesting career opportunities. This seminar will cover some basics about the patenting process, and how you might progress in a career in IP (*i.e.* a non-traditional science career).
