

Seth Jacobson – Colloquium seminar – February 3, 2022  
MSU

Title: "Threats and opportunities, why we should look up".

Abstract: "The Netflix hit *Don't Look Up* has spotlighted the risk of catastrophic impacts in the public's imagination, and similar to the film, an MSU astronomer is working with NASA's Planetary Defense Coordination Office. I will give an overview and describe my participation in NASA's DART (Double Asteroid Redirect Test) mission as well as the other small body (asteroids and comets) work that I am currently pursuing in the Planetary Makerspace at MSU."
