Title: Physical Review Journals and the Scientific Publishing Process

Abstract:
I briefly introduce the American Physical Society and its various activities. Among the most important is the publication of the Physical Review family of journals which I introduce with a brief history, with emphasis on those that publish papers in particle physics, gravitation and cosmology. I then describe the peer review process as it is done for the Physical Review journals, in particular for PRD. I end with an outlook to current and possible future trends in scientific publishing.
